

KFG H&H Measurement is specialist in level measurement. We are a Dutch company with major experience in the field of liquid and gas processing for 'onshore and offshore' applications. From the North Sea to Oman. In this newsletter we are pleased to inform you on our new technical support services. Adding even more value to our level gauges, glass gauges and float switches!

M3 Technical Support

M3 Technical Support (Measurement Mounting & Maintenance service) is a new installation and support service available from H&H Measurement. We have been providing top quality level measurement products for many years and can now offer our customers extra service packages. For trouble-free on-site installation in high-pressure and high-temperature environments anywhere in the world. By experienced and certified welders, installers and project managers.

M3 | Measurement

Have our specialist on-site to measure everything that is needed to ensure that you get our products with the right specs. This guarantees faster installation.

M3 | Mounting

Our mounting and welding specialists have the right product knowledge and welding experience to fit our level measurement equipment as quickly as possible. Success guaranteed.

M3 | Maintenance

After installation, we can assist in the maintenance of the level measurement equipment. Anywhere in the world. For long-term results, guarantees and benefits.

Maximum service for customers

At H&H Measurement we are strongly committed to customer satisfaction and service in all stages, from pre-sales to sales and technical after-sales service.

Pre-sales: valuable technical consultancy

Preparation is key. Our specialists can offer their expert consultancy in your project planning stage on:

- ✓ the right type of level measurement solution
- ✓ the right specs in terms of size and materials
- ✓ the exact measurements of all connections.

Sales and delivery: quick and reliable installation:

- ✓ installation by experience and certified welders
- ✓ guaranteed, quick connections to your system

After-sales: excellent maintenance

- ✓ regular checks on the running of our products
- ✓ arranging spare part replacements if necessary
- ✓ securing the guarantees on our solutions

High quality products

Our main concern is to provide you with safe and reliable solutions whenever high pressure level measurement is involved, whether you need 2- or 3-way solenoids, transmitters, heated hoses or tracing. With our products you will have absolute guarantee of a continuing and fault free production process.

Check out our website www.h-hm.com for our product overview.

Safeguarding your investments

We know from experience how important the role of our level measurement equipment can be in large installations. Therefore we are committed to offering truly the best solution and making sure its installation is a quick and worry-free process for our customers. Getting you the best out of your level measurement investments.

John Huijsman: "We know from experience how delicate the process of choosing and installing level measurement equipment can be. We know what products can work best with high pressure, high temperature or high-demand liquids. And after delivery of the products we are committed to making them work quickly. We want to stop local inexperienced general technicians making costly mistakes in the installation process, such as letting parts of the shipment go missing, dropping the products or brutally damaging connections. Believe me, we have seen it happening. Therefore we are very pleased we can now offer expert replacements for those weakest links. With experienced welders and fitters who know the level measurement products like no other and ensure safe and guaranteed connections and results."

Specialized & qualified welders

One of our service packages include qualified welders and piping specialists for mounting & maintenance on your location. For the technical installation of our equipment we work together with the excellent staff of Fluidor RVSA Services B.V. They will get your system up and running in no time.

Fons Kelder: "Our installation experts are qualified to work with high pressure equipment. Their certificates include safety procedures and tooling as well as the removing and placing of stud-

bolts, flenses, gaskets and closures. The technicians in our team are all multilingual and internationally experienced. They have a vast, worldwide experience in the oil and gas industry, utilities and chemical industries. And they have all been certified in their area of expertise, whether for first fitting, high quality welding, or mounting activities in the installation sector. All technicians contribute to effective solutions!"

When can we help you?

We look forward to hearing about your next project and how we can advise you on the right products AND services to provide you with the best level measurement solution.
